Business Need

Qwest Telecommunications is a rapidly expanding company that has recently purchased a number of other telecoms, including USWest. Qwest has been integrating the new acquisitions as quickly as possible. However they were hampered by the lack of an integrated network monitoring and management system.

Solution

NSAi personnel architected, engineered, & implemented an integrated network & system management solution. This involved developing customized monitoring solutions for this client's unique needs.

Business Result

Qwest was given a fully functioning, fully documented integrated network and system management solution. The NSAi team was expanded and retained for the purpose of implementing additional business solutions.
